## Hardware Installation

This chapter provides information on how to use jumpers and connectors on the IH32 Motherboard. Be cautious while working with these modules. Please carefully read the content of this chapter in order to avoid any damages.

CHAPTER

2

The sections include:

- 2.1 Memory Module (SO-DIMM) Installation
- 2.2 I / O Equipment Installation
- 2.3 Jumpers and Connectors
- 2.4 Jumper Settings
- 2.5 Connectors and Pin Assignment

## Chapter 2 Hardware Installation

### 2.1 Memory Module (SO-DIMM) Installation

The IH32 Motherboard has two 204-pin SODIMM slot. The socket supports up to 16GB DDR3L 1333/1600 SDRAM. When installing the memory unit, please follow the steps below:

**Steps 1** Firmly insert the SO-DIMM at an angle of about 30-degree into the slot. Align the SO-DIMM with the slot until it is fully inserted. The notch on the SO-DIMM should match the break on the slot.

**Step 2** Press downwards on SO-DIMM until the retaining clips at both ends fully snap closed and the SO-DIMM is properly seated.

#### CAUTION

The SO-DIMM only fits in one correct orientation. It will cause permanent damage to the development board and the SO-DIMM if the SO-DIMM is forced into the slot at the incorrect orientation.

## 2.2 I/O Equipment Installation

### 2.2.1 12V DC-IN

The Motherboard allows plugging in 12V DC-IN jack on the board without another power module converter under power consumption by Intel® 4<sup>th</sup> / 5<sup>th</sup> Generation Core i5 4200U/ 5200U Processor.

### 2.2.2 Serial COM ports

Three RS-232 connectors build-in the rear I/O. One optional COM port supports RS-422/485. When an optional touch-screen ordered with PPC, serial COM port can be connected to a serial or an optional touch-screen. You can change serial COM port setting through [BIOS](#).

### 2.2.3 External HDMI

The Motherboard has one HDMI port that can be connected to an external LCD monitor by HDMI cable, and it also needs to be connected to the outlet by power cable. The HDMI connector is a standard 19-pin Type A connector.

### 2.2.4 Ethernet interface

The Motherboard is equipped with Intel® I211 Gigabit-LAN Controller + I218LM Gigabit-LAN PHY which is fully compliant with the PCI 10/100/1000 Mbps Ethernet protocol. It is supported by major network operating systems. The Ethernet ports provide two standard RJ-45 jacks.

### 2.2.5 USB ports

Six USB devices (four with pin headers) can be connected to the system through an adapter cable. Various adapters may come with USB ports. USB usually connected the external system. The USB ports support hot plug-in connection. Whatever, you should install the device driver before you use the device.

### 2.2.6 Audio function

The Audio 7.1 channel capabilities are provided by a Realtek ALC886 chipset supporting digital audio outputs. The audio interface includes three jacks: line-in, line-out and mic-in.

## 2.3 Jumpers and Connectors

### 2.3.1 Component Side

## 2.3.2 Solder Side

## 2.3.3 I/O Side

## 2.4 Jumper Settings

This section explains how to set jumpers for correct configuration of the motherboard.

**NOTE:**

A pair of needle nose pliers may be helpful when working with jumpers. If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any changes. Generally, you simply need a standard cable to make most connections.

The jumper setting diagram is shown below. When the jumper cap is placed on both pins, the jumper is SHORT. The illustration below shows a 3-pin jumper; pins 1 and 2 are short. If you remove the jumper cap, the jumper is OPEN.

### 2.4.1 Jumper List

The following table lists the function of each of the board's jumpers.
